

## **My New Invention**

- (1) Description: My robot is called Rocky. He is clever and he can do everything for you. You can also teach him something which he does not understand.

On his head, there is a power button, wifi and a "Help" button. You can use the "Help" button to know more about him or ask him something. His face is a screen, he will show his mood there. On his body, there is a big cooker. You can choose a recipe from the screen on his body so that you don't need to cook by yourself. There are two chargers for you to use too.

On his shoes, there are two cleaning towels, so he can clean the floor when he walks. His legs, hands and neck have a spring, so those parts can be lengthened or shortened.

He has many functions and it is easy to use. I hope it can help people make their life easier.

- (2) Follow these steps to operate the robot:

It is easy to operate my robot if you follow the steps correctly.

First, check the package contents.

Next, insert the memory card into the card slot which is on his body.

Then, use the power cable to plug the robot for about 2 hours.

After that, you can use a remote control to turn it on and set his mode.

Finally, enter your information into the robot so you can start to use it.
