

Good morning everyone. First of all, I would like to ask you a question?  
Are you interested in exploring the world?

Today, I would like to introduce a must-read book to all of you. The name of the book is Geography – An integrated Approach by David Waugh.

There are 2 interesting parts that I would like to introduce. The first part is weather and climate and the second is plate tectonics. After reading these two chapters, you will understand terminology like cyclone, monsoon. Moreover, you will be able to explain why there are always earthquakes and volcanic eruption in certain places in the world.

If you are a hiking lover, you must not miss Chapter 3 and 6 because they are about the coastal and fluvial landforms. Your future trip will absolutely be an unforgettable one if you can apply what you have learnt in the book.

The most important thing is, you can learn better English at the same time. So, why not do more reading and have some fun?  
Thank you!
